

The Diving Bell Spider

While all the other spiders are busily living normal spider lives (if there is such a thing as a normal spider life) this fascinating spider is just doing its own unique thing. This spider builds its nest under the water. It builds a curious egg-shaped, water-proof nest with a hole in the bottom.

When it finishes building the nest, this eight legged wonder starts filling the nest with air by carrying air bubble from the surface of the water and putting them in the hole at the bottom of the nest. This little critter just happens to have special air bubble carrying hairs on its legs. The spider stops carrying bubbles when the nest is full. Then it moves in to start its family.

This unique spider was made so we can see God's remarkable power?

*“For since the creation of the world
God’s invisible qualities— his eternal
power and divine nature— have been clearly
seen, being understood from what has been
made, so that men are without excuse.”
(Romans 1:20)*
