

Venus Fly Trap

Venus has specially designed leaves that serve as natural traps. These leaves are covered with colorful, sticky stuff that attracts future meals. When a critter gets on the leaf, it gets stuck and the leaf closes to trap the prey.

Special juices digest the trapped critter. Venus has a good meal, and the leaf opens to do more trapping. This is a curious feeding habit for something that looks so beautiful innocent and harmless.

A rock can be put into one of the trapping leaves. When Venus finds out the rock cannot be digested, the leaf opens to wait for a real meal. How does this curious plant have the sense to know the difference? She has no brain to control her sophisticated trapping system. How does she know when her meal is finished? Is this a critter plant?

God is not limited by plant or animal types. Venus is just another wonder in God's wonderful world!

*“For since the creation of the world
God’s invisible qualities— his eternal
power and divine nature— have been
clearly seen, being understood from
what has been made, so that
men are without excuse.”*

(Romans 1:20)
