

The Wonder of Weather!

The complex systems of wind, moisture, temperature, condensation, etc. necessary for the formation of weather patterns had to be in place for the first-weather event.

Weather is ruled by natural laws. The chance of all these laws coming together by mindless chance is beyond or comprehension. Which came first, temperature changes, condensation or wind? What makes clouds float in the sky, and still build thunderheads miles into the air?

If there were no clouds before the first cloud, what was the need for the first-cloud. When did brainless water decide to turn into vapor so clouds could form...to produce life-giving rain?

All this had to come together for a reason other than to benefit animals, because even in the Biblical account animals had not yet appeared on the scene.

The only explanation evolution can provide is that weather somehow happened!

There is an explanation that fits the fact that weather is a product of natural laws and design demands a designer. Chance is a pitiful designer!

Creation says weather is a vital part of God's remarkable creation. It is the stuff of furious storms...and the wondrous rainbows that follow the storms. It is inspiration for powerful music and the melodies of the fresh, softness of a spring shower.

Which theory makes sense?
